

X in Fox

Foxes are the smallest member of the dog family. They have characteristics of both dogs and cats, and are nocturnal animals.

The Red Fox is the most common species of the foxes.

It lives in Europe, North America, Australia, Asia, and the Arctic.

The newborn cubs weigh 100 grams each, are blind and deaf, and can't walk. Their mum must stay with them, their dad brings food back for her to eat.

Foxes are mainly nocturnal animals. They are most active in the early morning hours and during the early hours of darkness.

The fox has a very keen sense of sight, hearing and smelling. Being predators, they use their senses to stalk their prey with stealth and patience.

The fox is a solitary animal. It usually hunts alone, rather than in packs like wolves or dogs.

Foxes eat almost anything, their diet depends on where they live. Foxes from the countryside eat hares, earthworms, beetles, birds' eggs, and fallen fruit.

Hello, Fox, my friend.
How are you today?
Not very well,
I am afraid.
I am very angry
Because I am hungry.
I've eaten one hen.
When?
Yesterday!
